

## Bulls and Steers

### Cattlemen rave about **Panakite** as a part of bovine diet...

**Robert Parker** DDS MS (Parowan, UT) has observed that when consuming the minerals:

- 1) His **cattle** winter out much better on less feed,
- 2) The **calves** are larger (i.e., 75-110 lbs instead of 50-60lbs.)

**G. J. Nelson PhD**, (Loma Linda, CA) Associate professor of Chemistry at LLU states when the material was incorporated in the feed of **livestock** and **poultry** there was an effect similar to that of kaolin.
