

Triple Screened

Net Wt. 12.6 lbs.  
2.1 GALLONS

Completely Natural Granules

# PANAKITE

GREENSKEEPER'S DELIGHT

GRANULATED TRACE MINERALS  
for golf courses and home lawns

Not a fertilizer. *Panakite*™ may be applied with a traditional lime spreader any time of the year. Will not burn. Granules remineralize the soil and have catalytic properties to boost normal fertilizers by enhancing bioavailability.

DIRECTIONS:

**LAWNS** – One pound of *PANAKITE*™ to each 40 square feet of lawn. Newly seeded lawns—apply to top soil and rake in well over entire surface. Old lawns—apply *PANAKITE*™ evenly, and sprinkle gently with water immediately after application to prevent wind dispersal. May be liquefied for quicker penetration. Revitalizes the soil. Pays for itself.

**GOLF COURSES** – 1000 lbs per acre once every three years. One-ton tote bags available. Promotes greater density sprouting and good humus. Add to your divot mix to accelerate re-growth. Runoff is harmless to water reservoirs for irrigation. Makes grass more wilt resistant while saving future watering and fertilizer expense.

Window Peak

Greenskeeper, Stockdale G & CC (CA) Never lost **newly planted trees** when using *PANAK-ITE*, but lost four the previous year when he transplanted w/o it. Much deeper root penetration on **greens** and healthier, heavier **turf** elsewhere with *PANAK-ITE*.
