

Does eat Montmorillonite¹, and Oats.

Free Choice

Well very interesting!!! I went out tonight to do a little work in the yard...We have been painting the front of our house and moved everything out from under the porch. There was a doe licking the spilled mineral off of a pile on the ground. Free choice. Hmmm. I bet the guys that have those big elk and deer farms would love *Panakite* for horn and tine growth.

(Carolyn N., Herriman, UT)

Feeding deer *Panakite* could spell big bucks!
