

Hi! I just love Uncle Tom's **Farm Fresh** Pig Dirt. Thought you would like to know that with just a few ounces a day I gain weight faster, and don't need to eat as many beet tops, or as much pig slop. The cost of the pig dirt is far less than my normal food. Also, I don't get bloated or dehydrated when I get my daily ration. Pigs have bigger families when they get the extra trace minerals found in this product. It's basic clay matrix known internationally as **Montmorillonite**, holds a bouquet of ions, lignitic silts and colloidal trace minerals, all chelated for easier assimilation and absorption in the small intestine. Our supplier calls the mix **Panakite** that he sells to agricultural and horticultural markets to distinguish it from other diatomaceous sediments sold into the animal husbandry and nutritional industries. Humans can also take smaller dosages of the minerals in capsule or tablet form without getting fat, while still getting daily, Mother Nature's formulation for strong bones and tissues. A healthy organism rarely gets sick. My mom eats Tom's **Farm Fresh** Pig Dirt every day and gives it to my little brother.
